aim the aim of this study is to shorten the product design and development cycle to meet the continuous change and growth of customer

environmental requirements methods the applied research method introduces the concept of the inheritable structure of green products through structural similarity theory and quantitates environmental performance additionally based on the analysis of the obtained customer ecological requirements a hierarchical mapping method for customer requirements environmental performance weight product structure is proposed which achieves the rapid mapping of customer requirements crs to product structure in the product design process then four mutation operation methods combination decomposition replacement and material change are combined with a genetic algorithm and a method for generating a product structure mutation map is proposed to solve the problem of the non inheritance of some structures in the product design process finally considering the transmission shell as an example the validity and feasibility of the method are verified results the case study showed that the overall mass of the rear derailleur dropped by 27 58 kg and the environmental performance of the transmission was mainly related to its mass hence the proposed improvement method effectively improved the environmental performance of the transmission conclusion the hierarchical mapping method for customer requirements environmental performance weight product structure and the generation method for the product structure variation diagram proposed in this study can shorten the product design and development cycle this research can provide theoretical and methodological support for product design and development

this book constitutes the refereed post conference proceedings of the 14th ifip wg 5 1 international conference on product lifecycle management plm 2017 held in seville spain in july 2017 the 64 revised full papers presented were carefully reviewed and selected from 78 submissions the papers are organized in the following topical sections plm maturity implementation and adoption plm for digital factories plm and process simulation plm cax and knowledge management plm and education bim cyber physical systems modular design and products new product development ontologies knowledge and data models and product service systems pss

the 6th international conference on cooperative design visualization and engineering cdve 2009 was held in central europe luxembourg participants from ve continents came together to celebrate this annual event the papers published in the conference in this volume reflect the new progress in the following aspect research in developing cooperative applications is currently focusing on two directions one is the cooperation in the software development process and the other is the variety of the targeted cooperative software products many papers address how to facilitate cooperation in the software engineering process particularly global software engineering the importance of sharing information in cooperation is emphasized by the authors for example papers that addressed the development of sharing mental models tools for easily shared projects sharing links for cross media information spaces sharing resources and transfer of knowledge among team members etc have attracted special attention many papers presented in this volume are the research results of tackling problems in developing a great variety of cooperative software products the targeted systems are cooperative support for music creation cooperative process management systems cooperative visualization systems for geographic information cooperative cultural information sharing platforms cooperative reasoning systems cooperative sensor networks for environment monitoring remote cooperative video vehicle monitoring systems etc another aspect of the papers in this volume is dealing with the problems in later phases in the cooperative product production life cycle

the topics addressed range from partner selection for operation at the beginning requirement gathering requirement negotiation to cooperativedesign production to cooperative testing and nally to cooperative system operation
