today as the large international genome sequence projects are gaining a great amount of public attention and huge sequence data bases are created it be comes more and more obvious that we are very limited in our ability to access functional data for the gene products the proteins in particular for enzymes those data are inherently very difficult to collect interpret and standardize as they are highly distributed among journals from different fields and are often sub ject to experimental conditions nevertheless a systematic collection is essential for our interpretation of the genome information and more so for possible appli cations of that knowledge in the fields of medicine agriculture etc recent pro gress on enzyme immobilization enzyme production enzyme inhibition coen zyme regeneration and enzyme engineering has opened up fascinating new fields for the potential application of enzymes in a large range of different areas it is the functional profile of an enzyme that enables a biologist of physician to analyze a metabolic pathway and its disturbance it is the substrate specificity of an enzyme which
